DIRECTIONS FOR DECIMAL OPERATIONS CARD GAME

1. Place cards in a stack or pile in the middle.
2. At the count of three, everyone chooses a card and places them face up for all to see.
3. Immediately get to work adding, subtracting or multiplying all the numbers on your dry erase board. (Your teacher will let you know if you are to add, subtract or multiply.)
4. Once you complete the problem, put your marker down and say "done". If you aren't the first one finished, you still need to complete the problem. You will get points for a correct answer.
5. Once everyone has an answer to the problem, check it together on the calculator.
6. Scoring:
 - The first one finished with a correct answer gets two points.
 - Anyone else with a correct answer gets 1 point.
 - Continue play using your teacher's guidelines.
